

Remote Welding Solutions

BLACKBIRD
ROBOTERSYSTEME

Company Profile

The remote laser welding experts

Blackbird Robotersysteme, a subsidiary of the SCANLAB Group, develops intelligent laser welding solutions with scanning optics. The scanning solutions developed and manufactured in Germany can be integrated seamlessly into industrial manufacturing systems - particularly robotic cells.

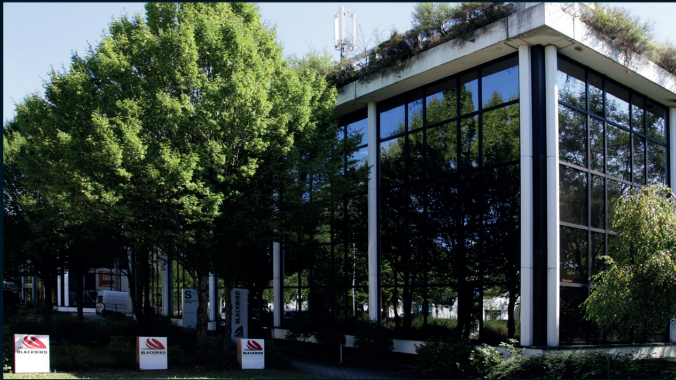

Core competencies include in-house development of the control systems and the intuitive user software of the system solutions. Combined with the SCANLAB scanning heads, a broad range of proven systems are available to industry.

At home on the manufacturing floor

Seamless installation and highly economical operation of the systems are ensured through comprehensive services and user training. Blackbird products are used around the world for high performance welding applications in the automotive industry as well as a variety of other manufacturing industries.

The SCANLAB Group with approximately 200 employees and an annual production volume of over 20,000 systems is the leading international OEM manufacturer of scanning solutions.

Quality Culture

Since the company was founded in 2008, the experienced team of engineers and software developers has focused on powerful control system technology and software for laser material processing applications.

The Blackbird experts have in-depth knowledge of production processes and system technology, which they integrate into innovative control system.

Systematic quality assurance of all products is a matter of course at Blackbird - every system is thoroughly inspected and tested by highly qualified personnel at each step of the manufacturing process.

A fully equipped laser laboratory is available for testing and validation of newly developed systems and to fine-tune custom solutions for individual customers.

Challenge us!

Grow with us

Our excellent market position and satisfied customers form the basis of our continued international growth. We are always looking for motivated professionals who want to help shape the future of the laser welding industry.

Active personnel development is a way of life in the entire SCANLAB Group, since the continuous technical and personal development of the entire team is very important to us. Blackbird Robotersysteme offers the assurance of a secure job and great career opportunities.
